

Financial Portrait Software System™

fps smartclient 10.7

- consists of a custom repository built on top of a separately-packaged client software solution from a market-leading vendor
 - is implemented essentially as a refactoring of the IBM i presentation layer
 - Efficiencies, security and UI data typing rules remain
 - It is not intended as web enablement for self-service or casual users
 - With the right firewall settings, it can be used to connect from your desktop to your IBM i via SSL
- [Click to Read more...](#)
- includes infrastructure to support easy install of FPS updates via internet
